

Understanding the Medicare Part D Prescription Payment Plan

What you need to know for 2026

For Medicare Part D patients considering or currently taking CREXONT® or ONGENTYS®, the Medicare Prescription Payment Plan allows patients' out-of-pocket cost to be capped once they reach the \$2,100 maximum*.

Patients will continue to pay their deductible, along with copays or coinsurance, during the initial coverage phase. However, after reaching the **\$2,100 out-of-pocket limit, they will no longer incur any out-of-pocket costs for these medications for the remainder of the year.**

This program provides greater predictability in managing prescription drug expenses.

Key Information for Patients Enrolled in the Medicare Part D Prescription Program

Here are two important changes you should know about the out-of-pocket prescription drug costs for patients enrolled in the Medicare Part D Prescription Payment Plan:

1 Medicare Part D patients out-of-pocket costs will be capped at \$2,100 in 2026*

2026 prescription medication guidelines limit the maximum amount of out-of-pocket prescription drug costs for patients.

2 The Medicare Prescription Payment Plan can make costs more predictable**

The payment plan option allows enrolled patients to pay prescription drug costs as fixed monthly payments to their Medicare Part D plan. Patients must be enrolled to participate in this program and patients may enroll at any point during the year.

Patients who enroll in the payment plan:

- Patients enrolled before January 1, 2026, could have maximum payments of approximately \$175 per month (12 payments) for all of their covered pharmacy medications, for a yearly total of \$2,100* made directly to their Medicare Part D plan.
- Enrolled patients have no additional pharmacy copays.

* Includes Medicare Part D (PDPs), Medicare Part C with prescription drug coverage (MA-PDs), and those enrolled in Medicare Savings Programs and the Medicare Part D Extra Help Program.
